Inves	tigation					with Jack Probstein, consultant for owner, Tom Toy. Tom Toy was not on site. Informed Mr. Probstein that, while a significant amount of site clearance has been performed, progress is not satisfactory to the Department. The above ground tank slated to facilitate the efficient consolidaton and removal of stored liquids has not yet been staged. Several drums and totes containing rinsate were still left open and exposed to precipitation. These containers were to be covered as promised during the April 2011 Progress Check. Observed a leak from the facility's boiler, tested it for pH-was neutral, warm water. The leaking water was dripping onto the facility grounds. Advised Mr. Probstein of situation wherein he promptly contacted an employee and informed me the water leak would be stoped within the hour. Advised Mr. Probstein that I would be returning to the site shortly with my Superviisor, Pete Taylor.	South	·	0/0/11 11.3/

Task	Assigned Staff	Due Date	Completed Date	Hrs Spen	Incident Action Comments	Organization	User ID Last Updt	Dt/Time Last Updt	
Perform Investigation	Farrell, Tom	Date	Date 6/6/11	3	Progress Check performed with Pete Taylor. Pete Taylor and I met with Jack Probstein, consultant for Tom Toy, owner. Mr. Toy was not on site. Readilly observable containers previously found to be exposed to precipitation were covered with tarps. The boiler leak was on going and extended a pool of water approximately 50 feet which was encroaching on an area of steel drums containing rinsate. Mr. Probstein was advised that he must stop the boiler leak to prevent it from contacting any containers. Additional trailers have been removed as scrap and totes containing rinsate have been removed and inventoried. A concrete pad to stage the 5,000 gallon tank slated to store the rinsate to facilitate its remvoval has been cleared. Mr. Taylor informed Mr. Probstein of the potential fines to be issued if rinsate removal does not begin this month and continue in a steady fashion. Mr. Probsten stated that he understands the urgency to move forward and that		I	6/6/11 11:57	
Perform nvestigation	Farrell, Tom		6/20/11	5	he will relay this information to Mr.Toy.		TFARRELL	6/22/11 17:03

Perform Investigation	Farrell, Tom	Date	Date 8/22/11	4	Performed site visit for progress report follow-up: Met with owner Tom Toy and walked the site with him. Significant progress made with the removal of totes containing non-hazardous wastes. Reviewed non-hazardous waste manifests addressing the removal of approximately 37,000 gallons of drum rinsate wastes from totes. Next shipment is expected in approximately one week from the last shipment of August 12, 2011. Water boiler leak still occurring. A pan was observed under the leak which is reportedly emptied into the toilet, however, this pan was overflowing at the time of this inspection. The leak is causing ponding at the site and may be influencing the amount of water accumulating on the south side of the site. Mr. Toy was informed that this condition must be mitigated to which he agreed. Observed an apparent old soil pile with a pipe in it southeast of the process	Haz Waste - South	Last Updt	Last Updt 9/26/11 16:42
Perform	Farrell, Tom	·* · · · · · · · · · · · · · · · · · ·	10/18/11		building. Mr. Toy said he has accepted soils from "pipeline excavation jobs" in the past.	Haz Waste -	TEADDELL	10/20/11 14:36
nvestigation					Walked site. Observed approximately twenty 250 gallon totes lined up in the southeast end of the site, just to the north of where several 55-gallon drums are stored, the number of which has been obviously reduced. Mr. Toy explained that he has transferred the contents of several 55-gallon drums into the observed totes to facilitate future removal. Mr. Toy also noted that the disposal facility for which he has already sent approximately 37,000 gallons of the subject non-hazardous waste, has encountered a problem with their treatment system. This disposal facility is due to come in on 10/20/11 to take additional samples of Mr. Toy's waste stream to determine if his waste is causing the problem with their treatment system or others are. As such, no wastes have been removed since the last shipment of August 12, 2011. Mr. Toy was advised and agreed to contact this nspector should any such problems arise in the future. Mr. Toy also stated that he would seek quotes from another disposal vendor in the event that a solution can not be worked out with his current one.	South		Tribus 11 17.00

Perform Investigation	Farrell, Tom		10/27/11	3	Performed site visit. Met with Tom Toy and his consultant, Jack Probstein. Mr. Toy noted that the disposal company which he has been currently using has indicated that they have raised their rates approximately four fold. Mr. Toy stated that another vendor is coming to his site next Tuesday to collect samples to formulate a quote. I noted to Mr. Toy that his boiler is still leaking and puddling with runoff entering the adjacent woods. Mr. Toy noted that he has plans to either fix it or dismantle it depending on a quote he is waiting on to ship incoming drums off-site for cleaning. I asked Mr. Toy to call me as soon as the resumption of waste removal is scheduled to which he agreed.	South	TFARRELL	10/27/11 12:02
Perform Investigation	Farrell, Tom		11/29/11	3	Performed site visit and met with Mr. Toy. Noted the contents of several additional 55-gallon drums which were staged both adjacent to the south side of the process building and at the southern end of the site had been transferred to 250 gallon capacity totes. These totes have been staged for easy access such that a vacuum tanker should have no problem extracting the fluids from them as complete vehicular access around the process building is now possible. Mr. Toy stated that he has recieved an appropriate quote from a new disposal vendor yet he has not ordered a pick up as he is due for cancer surgery. I informed him that if he could not attend to the waste removal process he would need to delegate this action or the Department would commence with enforcement action. Mr. Toy agreed to order the pick up today. I explained to Mr. Toy that he would also need to submit a schedule of proposed actions. I also noted that the failure to repair the boiler water leak potentially could exacerbate environmental conditions leading to more costly future site remediation cleanup costs.		TFARRELL	11/29/11 12:16
Perform Investigation	Farrell, Tom		1/4/12	3	Performed site visit. Met with owner, Tom Toy. Tom noted documentation indicating two tanker truck loads of non-hazardous waste water were pumped from totes and disposed of at a vendor's facility in December 2011. Tom noted that he anticipates sending out two such loads per month. Facility appearance is significantly improving. Removal of all legacy waste containers is estimated to take several more months. The next load to be removed is reportedly scheduled for January 5, 2012. Mr. Toy indicated that he would fax the disposal documentation to me.	Haz Waste - South	TFARRELL	1/4/12 14:26

Perform Investigation	Farrell, Tom		1/19/12	3	Performed Site Visit. Met with owner Tom Toy and his consultant Jack Probstein. On this date, Superior Barrel & Drum had 6,100 gallons of spent washing fluids classified as a non-hazardous waste removed from totes into a tanker truck. Mr. Toy indicated that he is in the process of setting up the next load removal and anticipates keeping the schedule of removing such wastes approximately every two weeks.		TFARRELL	1/19/12 13:02
Perform Investigation	Farrell, Tom		2/1/12		Performed site visit. Met with owner, Tom Toy. Mr. Toy stated that he has a load of waste water due to be removed on 2/16/12. Walked site and noted some improvement to facility housekeeping. Advised Mr. Toy that I would be returning to ensure that progress continues.	Haz Waste - South	TFARRELL	2/1/12 16:53
Perform Investigation	Farrell, Tom		3/1/12		Performed site visit. Met with owner, Tom Toy. Mr. Toy provided a copy of the Bill of Lading for the removal of 6,000 gallons of non-hazardous drum rinsate. Mr. Toy stated that today (March 1, 2012) is the last day that he will be accepting empty drums for drum clean-outs at this location as his company will be subcontracting out this task. Mr. Toy stated that he will be focused on removing the remaining waste residuals from his site. Site conditions appear to be improving as the volume of residual drum rinsate water is diminishing. I advised Mr. Toy that I will continue to follow up with progress.		TFARRELL	3/1/12 13:27
